

INSTRUCTIONS

1. Gather Your Gear

Grab your gold pan, sifting screen, and bag of Firefall gravel. Find a comfortable spot along the waterway and set your sifting screen with the two magnets facing downstream.

2. Fill Your Pan

Scoop your pan about $\frac{3}{4}$ full with the gravel mixture. Break up any larger clumps with your fingers.

3. Submerge & Sift

Place your pan in the water canal and begin sifting gently.

4. Shake It Up

Move your pan back and forth to help the gold and heavier minerals settle at the bottom.

5. Sort the Sediment

Keep shaking while allowing larger rocks to rise to the top. Carefully remove pebbles and toss them back into the canal.

6. Wash Away the Lighter Sand

Tilt your pan slightly forward and let the water gently rinse away the lighter material. Take your time, patience is key!

7. Re-Pan for Hidden Gold

Rinse your black sand and pan again, fine gold often hides in the last bit of concentrate.

8. Collect Your Treasure

Place your discoveries in your collection vial and store them proudly in your Firefall Backpack.

9. Congratulations!

You've just completed the Firefall Gold Panning Experience — a tradition of discovery and adventure!
